

Hydropower Products, Equipment and Solutions

TEMP-PRO

powering the world one degree at a time

Since 1972, Temp-Pro has been supplying a complete range of temperature sensors and related products designed to serve the needs of multiple industries. Temp-Pro continues to evolve and serve the needs of the most demanding of customers through integrated in-house manufacturing.

Temp-Pro products are found in:

- Temperature Sensors
- Thermowells
- Electrical Enclosures
- Electro-Mechanical Assembly
- Cable & Harness
- Miscellaneous Instruments & Accessories

In the era of renewable energy, hydropower stands tall, championing clean electricity from flowing water, curbing environmental impact. It's a key player in our shift to a sustainable energy future. Temp-Pro is committed to supporting our Hydropower Industry clients with customized temperature measurement devices and solutions to meet their needs.

Products, Equipment and Solutions include:

- ◆ Stator Slot Resistance Temperature Detectors (RTD's)
- ◆ Generator Core RTDs
- ◆ Generator Frame RTDs
- ◆ Air-Gap Flux Probes
- ◆ RTD Extension Cable
- ◆ Electrical Terminal Box
- ◆ Averaging RTDs
- ◆ Miniature Bearing Sensors
- ◆ Wire Harness & Cable Assemblies

**OIL HEAD
RTD SENSORS**

**BEARING
RTD SENSORS**

It is essential to measure temperatures of the bearings in turbines, generators, and other systems to identify the hot spots and overheating that can lead to increased wear and tear.

**ELECTRICAL
TERMINAL BOX**

**MINIATURE BEARING
SENSORS**

**AIR COOLER
AVERAGE RTD**

**WIRE HARNESS & CABLE
ASSEMBLIES**

**STATOR
CORE RTDS**

STATOR SLOT RTDS

Stator Slot RTDs can be embedded in either NEMA G-11 or our Semi-Conductive material for installation into the stator of your application.

NEMA G-11 provides a mechanical protection for the RTD during the installation phase and protects the RTD throughout its life span.

Semi-conductive material offers mechanical protection while providing the added advantage of corona dissipation.

These RTDs can be constructed from the semi-conductive material, or alternatively, the same coating can be applied to the standard material for enhanced performance.

- Accurate across a greater area of the stator
- Extremely responsive to temperature change
- Custom manufactured to various lengths
- Directly installed between windings
- RTD lengths eliminate problems with "tip sensors"
